

Nussbaum Unique Technologies

Smart Lift Nylatron-Nut

Nussbaum's Smart Lift (2 Post Mechanical Screw Lift) robust construction and fully developed technologies are the results of manufacturing more than 10,000 units per year and the experience of manufacturing lifts for over 30 years.

Smart Lift Features

- low wear Nylatron-nut guarantees a quiet operation
- 5 years warranty on spindle and spindle-nut
- two motors integrated into columns
- Poly-V belt –almost completely wear-free

Nylatron

Nylatron is a tradename for a family of nylon plastics, typically filled with molybdenum disulfide lubricant powder. It is used to cast plastic parts for machines, because of its mechanical properties and wear-resistance.

Nylatron is used normally as a replacement for cast iron or forged steel and as a plain bearing material, especially in screw conveyor applications.
